38% % over goal
12 High Tide Club members

FUNDRAISING

$805,000

$720K cash
$85K in-kind
$10K average sponsorship

SPONSORSHIPS

Impacting Cancer Research

One of LOWVELO’s first research grants was issued in 2021 — $50,000 for a Hollings project to create purified versions of CAR-T-cells, which are used to treat certain leukemia and lymphoma patients. The goal of the project is to reduce the side effects associated with CAR-T-cell therapy and potentially make it more effective. By building up its own program, Hollings will make this cutting-edge treatment much more accessible to patients in South Carolina.

CAR-T-cells are programmed to attack and kill cancer cells.
